Nuclei are very enlarged and variability in shape and size, irregular nuclear membranes, nucleoli and abnormal chromatin patterns. Mitoses are common. Tumor invades in fat tissue. Stroma is invasion of lymphocytes.

Diagnosis Details: Infiltrating urothelial carcinoma, high-grade, infiltrating in fat tissue

Comments:

Formatted Path Reports: BLADDER TISSUE CHECKLIST

Specimen type: Cystectomy

Tumor site: Bladder

Tumor size: 6 x 6 x 5 cm

Tumor features: None specified

Histologic type: Transitional cell carcinoma

Histologic grade: Poorly differentiated

Tumor extent: Perivesical tissue (microscopic)

Lymph nodes: Not specified

Lymphatic invasion: Not specified

Venous invasion: Not specified

Margins: Uninvolved

Evidence of neo-adjuvant treatment: No

Additional pathologic findings: Tumor invades bladder wall, perivesical fat

Comments: None
