Final Diagnosis (Verified)

Left ureteral margin, biopsy with frozen section:

Segment of ureter demonstrating marked chronic inflammation and prominent denudation of epithelium.

Right ureteral margin, biopsy with frozen section:

No tumor seen.

Additional left ureteral margin, biopsy with frozen section:

Chronically inflamed ureter segment with prominent denudation of surface epithelium, however, no malignancy is seen.

Urinary bladder, resection:

Invasive high grade transitional cell carcinoma.

Maximum tumor diameter is 1.5 cm.

Tumor invades through muscular propria into underlying perivesical soft tissue.

Tumor comes to within 1.8 mm of the inked perivesical soft tissue margin.

No evidence of lymphovascular invasion.

Negative urethral margin.

Right pelvic lymph nodes, excision:

Six (6) benign lymph nodes with no evidence of metastatic neoplasm.

Appendix, resection:

Negative appendix with luminal fibrosis and distal appendix.

ICD-O-3
Carcinoma, urothelial, NOS
8120/3
Site: bladder, NOS

Gross Description (Verified)

"FSA." All frozen section tissue is submitted in cassette "FSA,".

"FSB." All frozen section tissue is submitted in cassette "FSB,".

"FSC." All frozen section tissue is submitted in cassette "FSC,".

"D, Bladder." The specimen consists of a previously opened bladder with attached fatty tissue with an overall measurement of 10.1 x 7.2 x 3.7 cm. Upon reconstruction, the bladder measures 4.4 x 6.4 x 4.5 cm. The urethral margin is inked black, shaved, and submitted. The bladder has previously been opened along the anterior aspect to reveal a 1.5 x 1.3 cm pale tan, firm, well circumscribed mass located on the left central anterior aspect of the bladder wall. The anterior soft tissue margin is inked black. On sectioning, this mass measures 0.9 cm in thickness, grossly appears to extend through the bladder wall and comes to within 0.1 cm of the inked soft tissue margin. The left ureteral orifice is identified and was probe patent. A possible right ureteral orifice is identified. The mass does not grossly appear to involve the left or right ureteral orifices. The remaining bladder mucosa has a pale tan to gray-tan appearance. No cysts or areas of interest are identified. "D1," urethral margin; "D2-D3," mass to include anterior soft tissue margin; "D4," mass to include left ureteral orifice; "D5," possible right ureteral orifice; "D6," posterior bladder; "D7," trigone; "D8," right bladder wall, representative. NOTE: Please see attached drawing.

"E, Right pelvic lymph node." The specimen consists of 2 yellow-tan fatty fragments measuring 3.8 x 0.7 x 0.8 cm and 3.8 x 2.2 x 1.2 cm. On examination, 6 possible lymph nodes are identified. These range in size from 0.7 to 2.2 cm. Representative sections are submitted into cassettes "E1-E2," representative.

"F, Appendix." The specimen consists of a 5.3 x 0.4 cm appendix with a small amount of attached periappendiceal fat. The serosa is gray-tan with no adhesions. On sectioning, the lumen has a pale tan thickened appearance. No fecaliths or perforations are identified. The margin is inked black. "F," fragments, representative.

"G, Left pelvic lymph node." The specimen consists of a 4.4 x 3.8 x 1.8 cm aggregate of yellow-tan fatty tissue. On examination, 3 possible lymph nodes are identified. These range in size from 0.5 to 3.8 cm. The 2 smaller lymph nodes are submitted in toto. A representative section of the larger lymph node is submitted. Free in the container is a 3.0 x 0.4 cm tan-brown cylindrical vessel. "G," 4p, representative.

Signature Line

Frozen Section Diagnosis (Verified)

FSA: "Left ureteral margin" measuring 0.5 cm diameter x 0.4 cm length, black ink on true margin.

FSB: "Right ureteral margin" measuring 0.5 cm diameter x 0.4 cm length, black ink on true margin.

FSC: "2nd left ureteral margin" measures 0.5 cm diameter x 0.3 cm length, ink at true margin. Staple removed from opposite end.

FSA: "Left ureteral margin," frozen section: Predominantly denuded epithelium with small attached portion of carcinoma in situ. No invasive component present.

FSB: "Right ureteral margin," frozen section: Negative for malignancy.

FSC: "Left ureteral margin, second," frozen section: Negative for malignancy.

"Bladder" Received fresh, previously opened by surgeon is a bladder. Section of tumor and adjacent normal bladder submitted for tumor studies.

Clinical Information (Verified)

Bladder cancer.
